EDUCATION

Stevens Institute of Technology. | **M.S., Computer Science** (GPA: 3.9 / 4.0) Hoboken, NJ Aug 2025 - May 2027
PES Modern College of Engineering | **B.E., Information Technology** (GPA: 3.3 / 4.0) Pune, India Sep 2022 - May 2025

WORK EXPERIENCE

PES Modern College of Engineering - AI Form Generation Research | **Research Intern** Nov 2024 - Feb 2025

- Developed FormatriX: an AI-powered form builder generating customizable forms in 30 - 45 sec via intelligent schema prediction; built full-stack with Next.js, Neon PostgreSQL, Prisma, Kinde auth, drag-and-drop editor, shareable links, and response analytics.
- Published: "FormatriX: An AI Form Builder" - IJRASET, Apr 2025

PureEco Tech Solutions | **Software Development Intern** Jan 2022 - Apr 2022

- Rebuilt front-end and back-end components of a transport management platform, integrating real-time logistics data feeds, optimizing API response handling, and resolving cross-browser UI issues to improve accessibility and reliability.
- Published: "Transport Management System" - IJARCCCE, Apr 2022

PROJECTS

Agentic AI Data Scientist | [Agentic AI Data Scientist](#)

- Architected a full-stack AutoML platform (FastAPI + Next.js) orchestrating multi-step agentic workflows with LangChain to automate task detection, data preprocessing, model training, clustering analysis, and AI-generated insight dashboards from a single CSV upload.
- Engineered a modular scikit-learn preprocessing and training pipeline executing 5-fold cross-validation across five classifiers (Logistic Regression, KNN, Naive Bayes, Decision Tree, Random Forest), reporting macro F1-score and standard deviation per model.
- Integrated the Google Gemini API into an agentic reporting layer that synthesizes model evaluation results into natural-language reports, with rule-based fallback and built-in instrumentation capturing usage signals and latency metrics from day one.
- Implemented an unsupervised clustering module comparing K-Means and Hierarchical Clustering with silhouette scoring, enabling label-free dataset structure discovery alongside supervised evaluation.

FlowForge | [FlowForge](#)

- Architected FlowForge, a production-grade workflow automation platform enabling users to design event-driven workflows via a visual drag-and-drop canvas built with React Flow and deployed on Vercel.
- Engineered trigger-based automation supporting Webhooks, Stripe, Google Forms, Slack API, and Zapier, with Inngeist powering queue-based background job execution and fault-tolerant processing.
- Designed an event-driven microservices architecture with Prisma ORM and PostgreSQL for workflow state persistence, and integrated Sentry for full error monitoring in production.

Generative AI Techniques | [Generative AI Techniques](#)

- Built an LLM Router for dynamic query classification and a RAG application (Chat with PDF) using vector embeddings and semantic retrieval, demonstrating end-to-end AI system design in Python.
- Implemented Advanced RAG techniques including Hypothetical Document Embedding (HyDE), Parallel Query Retrieval, and Reciprocal Rank Fusion (RRF) to improve retrieval precision for complex queries.
- Engineered Chain-of-Thought and Step-Back Prompting pipelines using LangGraph to optimize multi-step LLM reasoning for complex problem-solving tasks.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript
- **AI / ML:** scikit-learn, pandas, NumPy, LangChain, LangGraph, RAG, Gemini API, OpenAI API, FastAPI, Prompt Engineering, LLM APIs, RAG Pipelines, LLM Evals, Multi-agent Architecture
- **Backend & Databases:** Node.js, Express.js, FastAPI, tRPC, REST APIs, Inngeist, Prisma ORM, PostgreSQL (Neon), MongoDB, MySQL
- **Automation & Integration:** N8n, Slack API, Zapier
