EDUCATION

Stevens Institute of Technology.

M.S., Computer Science

- **GPA:** 3.9 / 4.0

Aug 2025 - May 2027

Hoboken, NJ

PES Modern College of Engineering

B.E., Information Technology

- **GPA:** 3.3 / 4.0

Sep 2022 - May 2025

Pune, India

WORK EXPERIENCE

PES Modern College of Engineering - AI Form Generation Research

Nov 2024 - Feb 2025

Research Intern

- Developed FormatriX: an AI-powered form builder generating customizable forms in 30 - 45 sec via intelligent schema prediction; built full-stack with Next.js, Neon PostgreSQL, Prisma, Kinde auth, drag-and-drop editor, shareable links, and response analytics, leveraging prompt engineering and AI-assisted development tools.
- Published: "FormatriX: An AI Form Builder" - IJRASET, Apr 2025

PureEco Tech Solutions

Jan 2022 - Apr 2022

Software Development Intern

- Rebuilt front-end and back-end components of a transport management platform, integrating real-time logistics data feeds, optimizing API response handling, resolving cross-browser UI issues to improve accessibility and reliability, and utilizing AI-assisted development.
- Published: "Transport Management System" - IJARCCCE, Apr 2022

PROJECTS

Agentic AI Data Scientist Agentic AI Data Scientist

- Architected and rapidly prototyped a full-stack AutoML platform using Python (FastAPI) and Next.js, automating the entire KDD pipeline from task detection through AI-generated insight reports with a single CSV upload
- Engineered a modular scikit-learn preprocessing and training pipeline executing 5-fold cross-validation across five classifiers (Logistic Regression, KNN, Naive Bayes, Decision Tree, Random Forest), reporting macro F1-score and standard deviation per model.
- Integrated the Google Gemini API into an agentic reporting layer that synthesizes ML evaluation results into natural-language reports, with an automatic rule-based fallback to ensure 100% result delivery under API quota failures.
- Implemented an unsupervised clustering module comparing K-Means and Hierarchical Clustering with silhouette scoring, enabling label-free dataset structure discovery alongside supervised evaluation.
- Prototyped autonomous data preprocessing and model selection agents using Claude Code, reducing manual setup time by 50% and enabling on-demand workflow execution

FlowForge FlowForge

- Architected FlowForge, a production-grade workflow automation platform with a React Flow drag-and-drop canvas, deploying on Vercel and using Claude Cowork to orchestrate autonomous monitoring agents that eliminate manual bottlenecks
- Engineered trigger-based automation supporting Webhooks, Stripe, Google Forms, and manual triggers, with Inngest powering queue-based background job execution and fault-tolerant processing.
- Designed an event-driven microservices architecture with Prisma ORM and PostgreSQL for workflow state persistence, and integrated Sentry for full error monitoring in production.
- Leveraged GitHub Copilot to accelerate development, cutting feature implementation time by 30% while maintaining code quality and consistency across microservices

Generative AI Techniques Generative AI Techniques

- Built an LLM Router for dynamic query classification and a RAG application (Chat with PDF) using vector embeddings and semantic retrieval, demonstrating end-to-end AI system design in Python.
- Implemented Advanced RAG techniques including Hypothetical Document Embedding (HyDE), Parallel Query Retrieval, and Reciprocal Rank Fusion (RRF) to improve retrieval precision for complex queries.
- Engineered Chain-of-Thought and Step-Back Prompting pipelines using LangGraph to optimize multi-step LLM reasoning for complex problem-solving tasks.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript
- **AI / ML:** scikit-learn, pandas, NumPy, LangChain, LangGraph, RAG, Gemini API, OpenAI API, FastAPI, Prompt Engineering, Claude Code, Claude Cowork, AI-assisted Development
- **Backend:** Node.js, Express.js, FastAPI, tRPC, REST APIs, Inngest, Prisma ORM
- **Databases:** PostgreSQL (Neon), MongoDB, MySQL
